

# Coharts Seed: Cold VC Outreach Kit

Oct 2026 · Cold channels (LinkedIn, PitchBook-sourced email). Warm/DLA and direct-relationship firms run on their own tracks.

**The one-liner (use everywhere):** An Applied AI company: **the intelligence layer between a molecule and a medicine**. Foresight is AI-native, IaaS drug-development infrastructure that connects raw assay to regulatory submission and **simulates trial success before patient one** (BEAM builds documented models, CTS runs the trial in silico, iViz analyzes). Automated ICH E6(R3) governance and ICH M15 model credibility are built in as the regulatory moat, not the pitch. Validated retrospectively (NSCLC in proof of concept). **Tempus POC, Synthon pilot, and a Lilly CDA live. Raising a seed.**

## Rules

- **Lead with the intelligence layer and "simulate trial success before patient one."** That is the product. ICH E6(R3) governance and ICH M15 credibility are the **moat** (provable to a regulator), a supporting line, never the headline.
- **Proof first:** Tempus POC + Synthon pilot + Lilly CDA + retrospective validation. Do not claim prospective validation (NSCLC is in PoC). Never claim FDA qualification.
- **IaaS, never "SaaS."** No em dashes. Say "intelligence layer / infrastructure," not "simulation tool" and not "data-management product."
- **One specific reason per firm** in the first line (a recent deal or their stated thesis). Generic gets ignored.
- **One ask:** a 20-minute call; offer the deck ahead. Keep notes under 300 characters, DMs/emails under 150 words.

## Channel 1 — LinkedIn

### A. Connection request note (under 300 characters)

Hi [First], I'm Nate, founder of Coharts, the intelligence layer between a molecule and a medicine. We simulate trial success before patient one, raw assay to submission. Tempus POC, Synthon pilot, Lilly CDA. Raising a seed and [firm]'s [thesis/area] is a strong fit. Would value connecting.

### B. First DM after they accept (or InMail)

Thanks for connecting, [First].

Coharts is the intelligence layer between a molecule and a medicine. Foresight connects raw assay to regulatory submission and simulates trial success before patient one: BEAM builds documented models, CTS runs the trial in silico, iViz analyzes. ICH E6(R3) governance and ICH M15 credibility are built in, so the output is provable to a regulator. Validated retrospectively (NSCLC in proof of concept).

[One specific reason this fund fits.] We have a Tempus POC, a completed Synthon pilot, and a Lilly CDA, and we are raising a seed.

Open to a 20-minute call in the next week or two? I will send the deck first so it is a good use of your time.

### C. Engage before the ask (optional)

Comment substantively on the partner's recent post or thesis 2 to 3 days before sending B, then reference it in the DM.

Channel 2 — PitchBook-sourced cold email

PitchBook is for **sourcing and personalization**, not sending. Use it to (1) confirm the right partner, (2) pull one recent 2024-2026 deal to reference, (3) get/confirm the email (cross-check the workbook's inferred addresses), then send from nate@coharts.com.

**Subject:** Coharts — the intelligence layer between a molecule and a medicine ([specific hook])

Hi [First],

I am Nate, founder of Coharts. We are the intelligence layer between a molecule and a medicine: AI-native drug-development infrastructure that connects raw assay to regulatory submission and simulates trial success before patient one. BEAM builds documented models, CTS runs the trial in silico, and iViz analyzes. ICH E6(R3) governance and ICH M15 model credibility are built in, so the output is provable to a regulator.

[One specific reason, e.g. "I saw [firm] led [portfolio co]'s round; we are the intelligence layer underneath that thesis."]

Where we are: a Tempus proof-of-concept partnership, a completed Synthon generics pilot, a CDA with Lilly, and retrospective validation on real trials (NSCLC in proof of concept). We are raising a seed.

Would you be open to a 20-minute call in the next two weeks? I will send the deck ahead.

Best,  
Nate Ramanathan, Founder & CEO, Coharts, coharts.com

Follow-up (one week later, in-thread)

Hi [First], circling back. Since my note we have [one concrete update]. Still glad to walk through Foresight in 20 minutes if useful. If it is not a fit right now, I would welcome a pointer to the right person.

Tailored first lines — top cold Tier-A targets

| FIRM              | CONTACT         | FIRST LINE                                                                                                                                                                 |
|-------------------|-----------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Dimension Capital | Zavain Dar      | Dimension's science-and-compute thesis is exactly where we sit: Foresight is compute applied to the drug-development record and the trial around the molecule.             |
| Section 32        | Michael Pellini | You built Foundation Medicine into the system of record for genomic data. We are building the system of record for the drug-development program, with the models built in. |
| Conviction        | Sarah Guo       | Your thesis names biology as a domain needing specialized data. Coharts is an AI-native system of record for drug development, with agent-built models (BEAM) on top.      |
| Modi Ventures     | Sahir Ali       | Your AI-and-biology biostack thesis maps directly: one program record, with agent-built models and trial simulation running on it.                                         |
| Artis Ventures    | Austin Walne    | You coined TechBio. Coharts is TechBio infrastructure: the program record with simulation and analysis built in, end to end.                                               |
| 2048 Ventures     | Alex Iskold     | Your Vertical AI + Health + Bio thesis is dead-center: Coharts is vertical AI for drug development, a system of record with models built in.                               |
| Foresite Capital  | Vik Bajaj       | You invest in life-science infrastructure and you are data-science-native. Foresight is the program record and model layer that infrastructure has been missing.           |

## Sequence (per cold firm) and exclusions

---

- **1.** Source on PitchBook (partner + recent deal + email). **2.** LinkedIn connect (A) + InMail (B) if available. **3.** Day +2-3 engage (C). **4.** Day +3 send DM (B) or PitchBook-sourced email. **5.** Day +10 follow-up. **6.** Log every touch in the outreach tracker.
- **Switch off cold outreach the moment a warm path opens** (DLA, angel, portfolio founder).
- **Do not cold-outreach:** a16z, Lux, Basis Set, Bessemer (DLA opens these); Oncology Ventures, Care Equity (direct relationships); Tier-C off-thesis firms.

---

Keep the one-liner and proof list identical across every channel so the story is consistent when partners compare notes. Inferred vs. verified emails are tracked in coharts-seed-investor-pipeline.xlsx.
